Re: Clarification of Saviku's payment flow, intended account use and version 3 terms

Hello,

Thank you for your review. Please find our clarification below.

Current service model

Saviku is a property-management and booking-automation platform. It does not offer general escrow services.

The initial version 2 materials reflected our earlier intention to offer a broader escrow service, which would have required the applicable Central Bank of Kenya compliance arrangements. We subsequently moved away from that model and removed the general escrow-services offering.

Payment flow

Under the current version 3 model, guest payments for Saviku bookings are processed by the payment service provider identified in the payment flow and allocated to the relevant booking in Saviku's merchant account with that provider. The payment is not transferred directly to the host at collection.

If no eligible cancellation or dispute is open, Saviku instructs the provider to release the host payout 48 hours after the scheduled check-in time. Where a cancellation or dispute is raised within the applicable period, the transaction may instead be released, refunded or split following review under the accepted booking policy.

Intended use of the SasaPay account

The intended use of the SasaPay account is:

- collection of guest payments for confirmed accommodation bookings;
- settlement of the applicable booking amount to the verified property owner or host;
- processing of approved refunds or split outcomes; and
- collection of Saviku's disclosed platform fee.

It will not be used to receive general deposits, provide standalone escrow services, operate customer wallets or collect unrelated payments from property owners.

Version 3 publication and deployment status

The version 3 production implementation and associated payment terms had already been completed and tested before this review. However, the public website remained on the earlier version 2 wording due to a publication omission. We have now corrected the website so that it reflects the existing version 3 implementation.

For clarity, the implementation intended for production has passed its tests, but Saviku has not yet deployed the service to production and has not processed any live customer funds.

Proof of address

The tenancy agreement relates to the proprietor's home-based business operations, and we are available to provide any additional confirmation required for verification.

Kind regards,

Fanice

Saviku Technologies
